

Ready to lift your brow
game to the next level?

Choose the authentic Ultherapy® treatment

Ask your physician about Ultherapy®
and give your brow that lift.

www.ultherapy.com.au

The non-invasive Ultherapy® procedure is indicated for dermatological sculpting and lifting of the dermis on the upper face, lower face, neck and décolletage through the deposition of micro-focused ultrasound energy. Ultherapy® should not be used by persons with open wounds, lesions, severe or cystic acne, or implants in the treated area. Always read the label and consult your Healthcare Professional for more information. This medical device must be administered by a Healthcare Professional.

MERZ AESTHETICS

Lift your
brow game

Ultherapy®
stimulates your
own collagen
and lifts your
brow

Ultherapy®

Choose the
Authentic Ultherapy®
treatment

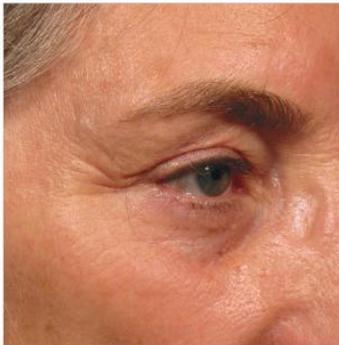

The *Brow Lift* that keeps giving

Get in the game with brow lifting Ultherapy®, the collagen boosting non-surgical treatment that lifts your brow to give you the shape and look you want.

As the skin matures, collagen fibres that provide internal support become worn. Ultherapy's ultrasound energy reaches below the surface of your skin to initiate your body's own natural repair process. Over time, this results in the creation of new, healthy, strong collagen and a variety of positive skin changes.

What to expect from an Ultherapy® *Brow Lift*

What happens during treatment?

Once you are happy to proceed with your treatment, your clinician will ask you questions about your medical history, current medications and any other relevant medical information. During the treatment session, you will be marked up with a pencil to identify the treatment areas. Your clinician will then proceed to apply ultrasound gel and the treatment will begin.

How long does the treatment take?

An Ultherapy® Brow treatment takes approximately 15 minutes.

Does it hurt?

You may have some areas that are sensitive and it is important to let your clinician know so they can make adjustments to the treatment to ensure optimal comfort. Every person's discomfort is different and your clinician will choose the most appropriate pain management plan for you, if necessary.

How soon until I see results?

In the early days following a brow treatment, patients commonly report some lifting and tightening of the skin. While this immediate tightening can be temporary, it signals that the beneficial process of new collagen generation has begun. Skin lifting on the brow is reported to continue to build over the next 2-6 months.

How often do I need to be re treated?

Results have been seen to last up to 10 months, although we recommend you re visit your clinician at 9 months to monitor progress and re evaluate if you require another treatment.
